

RHEOLOGY & SPECIALTY ADDITIVES

FOR WATERBORNE
SYSTEMS

Coatings, Inks,
Adhesives & Sealants

Arkema, a world leader in Specialty Materials

Building on unique set of expertise in materials science, Arkema designs specialty products that address ever-growing demand for innovation and sustainability. We are continuously looking for new ways to empower customers and industry leaders to address key challenges such as new energies, advanced technologies, dwindling natural resources, mobility innovation and urbanization trends.

Coatings solutions

Arkema is a trusted partner, offering a wide range of specialty resins and additives for virtually every sector of the coatings industry. With decades of formulation expertise, Arkema helps customers produce performance-driven, sustainable coatings, adhesives, and inks that can meet the most stringent industry regulations.

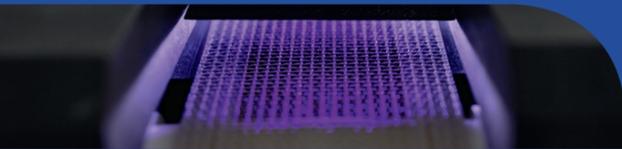

WATERBORNE systems

HIGH SOLIDS systems

POWDER coatings

UV/LED/EB systems

Make your formulations more sustainable!

For the world to change, we must change the materials we use. Thus, with our partners, we are continuously innovating to offer to our customers a wide variety of options to advance sustainability and performances. To move toward a more circular and lower carbon economy we look at both how the product is designed and how it enables the downstream performances. Hence, in addition of improving our product safety, our experts are committed to developing solutions using more renewable resources and lowering energy consumption across the value chain, while ensuring sustainable performances such as longer durability.

-  **ELIMINATION OF SUBSTANCES OF CONCERN & HAZARDOUS AIR POLLUTANTS**
-  **LOWER ENERGY INTENSITY / LOW CARBON FOOTPRINT**
-  **ALTERNATIVE FEEDSTOCKS**
-  **DOWNSTREAM BENEFITS**
-  **DURABILITY**

RHEOLOGY & SPECIALTY ADDITIVES

World leading designer and producer of additives for Coatings, Paints, Inks, Adhesives & Sealants

Customer intimacy, simplicity and reactivity as competitive edges. Our expertise is based on the rheology, the dispersion and the texture of complex formulations. Our solutions will optimize processing, stability and application properties of formulated systems. Discover our full range of rheology and specialty additives.

Performance

Design to offer sustainable & performing solutions

- Additives with high active content up to 100%
- Higher efficiency, use less
- Designed for low and zero VOC systems
- High value pigments optimization
- Solutions for fine-tuned rheology

Sustainability

Manage our activities as a responsible specialties manufacturer

- Clean processes based on water
- Low carbon footprint
- Sustainability portfolio assessment
- Proactive elimination of hazardous components
- Bio-sourced and biorenewable solutions

Innovation

Cultivate open dialogue and close relations with our customers

- Strong partnerships with major players of the Industry
- More than 5 new additives every year
- Global RD&I and regional application labs to provide fast reactivity to specific needs

Our offer for waterbased systems

Rheology modifiers

The choice of the right thickeners is a key step designing waterborne formulations. Rheology modifiers enhance major characteristics of formulations from production to the end-use.

Hiding Power

Antispattering

Good leveling

Body & structure

Sprayability

Dispersing agents

From plasters to lacquers, dispersing agents will improve processing and long-term stability with the most demanding pigments and fillers. Dispersing agents will also contribute positively to film properties.

Color development

Ease of process

Improved stability

Increased filler loading

Surface properties

SUSTAINABLE DEVELOPMENT GOALS

Our solutions portfolio is analysed for UN sustainable development goals. The method developed by Arkema is based on the methodological guide issued by the World Business Council for Sustainable Development and looks at the whole of the value chain.

WE OFFER SOLVENT, APEO, HEAVY METAL FREE AND BIO-BASED SOLUTIONS

to Coatings, Adhesives & Sealants to achieve our common goals for a sustainable future.

Add drops of vitamins to your formulations

World leading designer and producer of water-based rheology and specialty additives. Our expertise is used across multiple markets.

Coatings & Inks

Your needs are as unique as your waterborne formulations.

Rheological solutions are key to meet your requirements and offer additional benefits whatever the application mode, e.g. brush, roller, curtain, spray gun.

Adhesives & Sealants

Rheology modifiers and dispersants will enable to fine-tune the body and the structure, the gunnability and ease of application while keeping an excellent slump resistance without impacting ageing, mechanical properties and weatherability.

RHEOLOGY MODIFIERS

THICKENING MECHANISMS

WATER GELLING

- Viscosity increase at **low shear rates**
- Carboxylic acid groups interact with water and form a gel emphasized by chain entanglement

ASSOCIATIVITY

- Viscosity increase at **high shear rates**
- Hydrophobic end groups interact with the binder particles and/or their stabilizing systems by hydrophobic or ion-dipole interactions

SELF-ASSEMBLY OR ASSOCIATION

- Viscosity increase at **low shear rates**
- Hydrophobic end groups interact with each others by hydrophobic-hydrophobic interactions
- Depending on the design of the hydrophobic end groups, a thixotropic behavior can be obtained

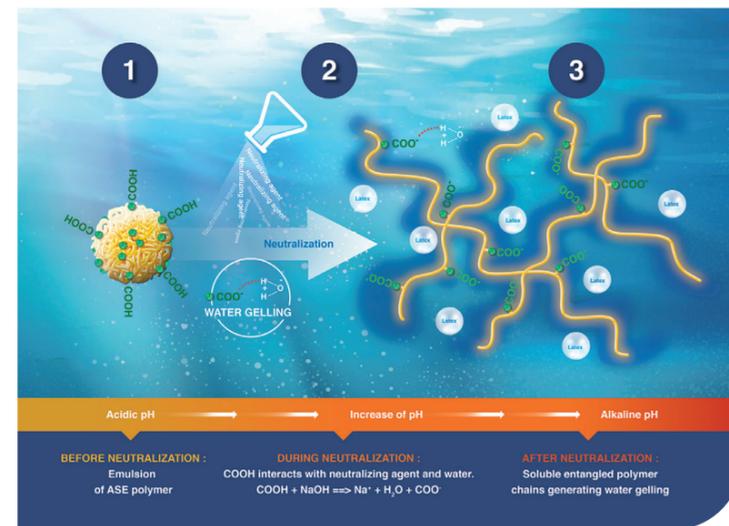

THICKENING TECHNOLOGIES

ASE: Alkali Swellable Emulsions

- Acrylic-type thickeners
- Backbone comprises carboxylic acid groups
- Need to be neutralized using an amine or an alkali solution in order to become water-soluble

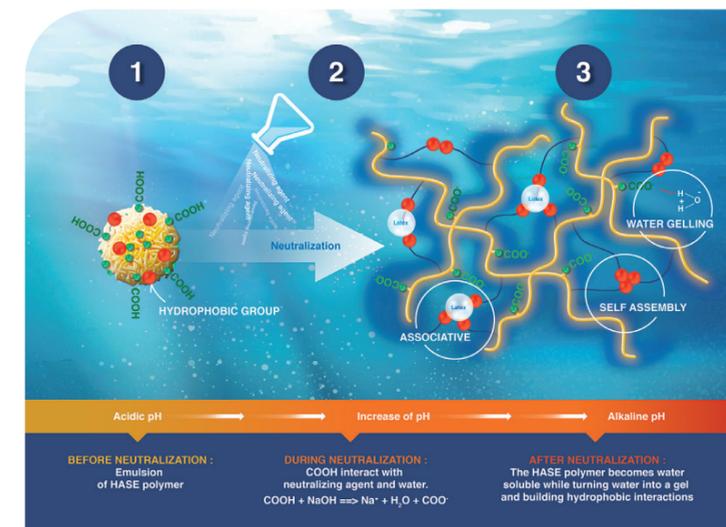

Neutralized carboxylic acid groups + chain entanglement
 ► **Strong water gelling effect**

Entanglement of ASE polymer chains

HASE: Hydrophobically modified Alkali Swellable Emulsions

- Acrylic-type thickeners
- Backbone comprises carboxylic acid groups
- Need to be neutralized using an amine or an alkali solution in order to become water-soluble

Neutralized carboxylic acid groups
 + chain entanglement
 ► **Water gelling effect**

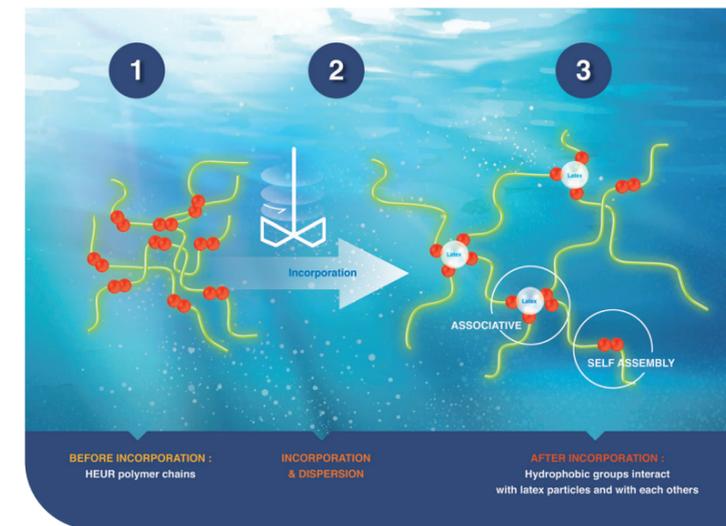

Hydrophobic end groups
 ► **Self-assembly mechanism**

Hydrophobic end groups
 ► **Associativity with binders**

HASE thickeners are therefore capable of selectively increasing viscosities in all ranges of shear rates

HEUR: Hydrophobically Ethoxylated Urethane polymers

- Polyurethane-type nonionic thickeners
- No specific pH adjustment
- Hydrophilic chain terminated by hydrophobic groups by means of urethane bond

Hydrophilic chain
 ► **Polymer solubility**

Hydrophobic end groups
 ► **Associativity with binders**

Depending on the design of the hydrophobic end groups
 ► **Self-assembly mechanism**

COAPUR™ & COAPUR™ BIO-BASED

A wide and comprehensive range of polyurethane thickeners from very Newtonian to pseudoplastic profiles. XS grades focus on tinting.

Great application properties:

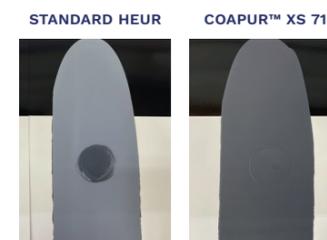

- Flow and leveling
- Application comfort
- Spatter resistance
- Color acceptance
- Water resistance
- Non ionic thickeners
- Less pH dependency
- Hydrophobicity

KEY BENEFITS

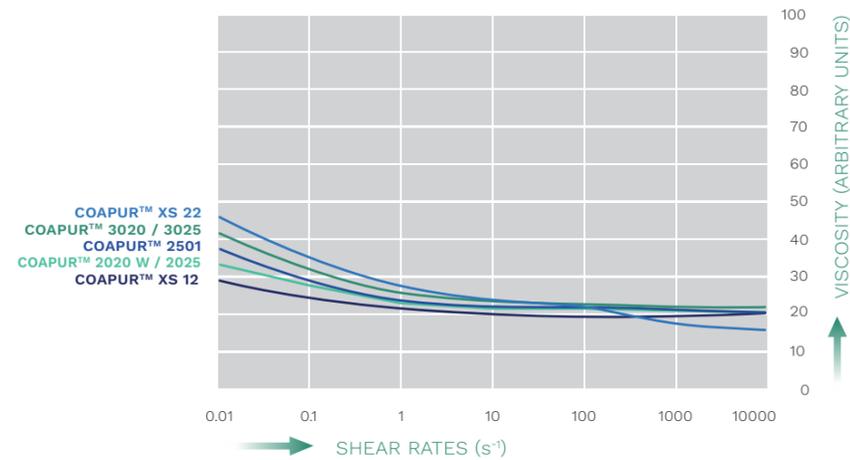

Water resistance

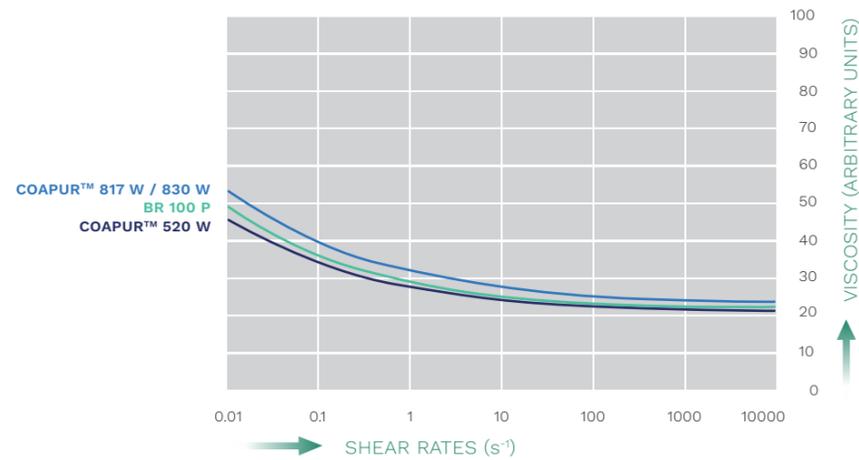

Color acceptance & rub out

RHEOTECH™ & RHEOTECH™ MB BIO-BASED MB

A comprehensive range of HASE rheology modifiers providing key benefits to coatings & adhesives formulations throughout their use and application.

Additionally, they are easy to use and cost efficient.

RHEOLOGICAL BEHAVIOR

UPON STORAGE,

Rheotech™ rheology modifiers bring:

- Premium in-can appearance
- Syneresis control
- Optimum behavior with tinting systems

DURING APPLICATION,

Rheotech™ rheology modifiers provide:

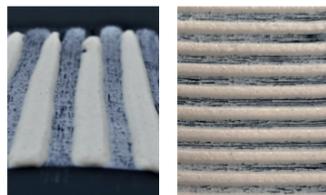

- Good sag resistance
- Spatter resistance
- High film build
- Sag resistance and leveling balance

These solutions offer excellent alternatives to HEC thickeners with better application properties.

KEY BENEFITS

Slump resistance

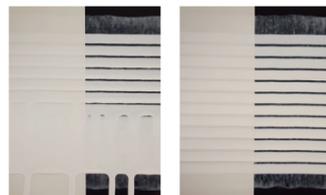

WITH RHEOTECH™ M 03

All Rheotech™ are APEO-free**, solvent-free** and heavy metal-free**. Rheotech™ M thickeners are designed for highly filled and viscous systems such as putties, adhesives & sealants and textured paints. **Most of the products in this brochure are now available with a lower carbon footprint version thanks to a bio-based sourcing using the Mass Balance approach. Don't hesitate to contact us to know more.**

*Ratio of bio-attributed biomass / Total product NF EN 16785

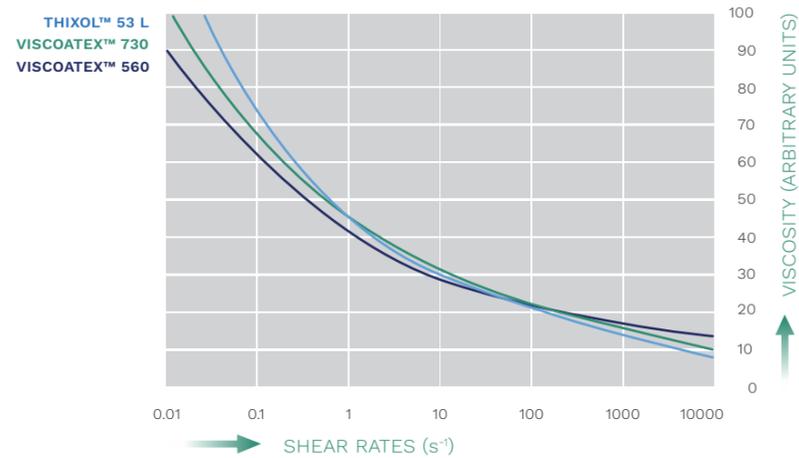

**Not intentionally added but not specifically measured (not part of product specification)

A full range of ASE (Alkali Swellable Emulsions) type acrylic rheology modifiers with key advantages during the formulation and the application such as ease of use, strong thickening, high efficiency, high body and structure and good antisetling.

These products are very versatile to increase low shear viscosities in a wide range of end applications. Besides they can be an excellent alternative to HEC thickeners.

RHEOLOGICAL BEHAVIOR

THIXOL™ - Specific and unique acrylic thickeners providing key features and formulation benefits:

- Thixotropy
- Sprayability
- Water dilution resistance
- Sag resistance
- Anti-settling
- Color acceptance

VISCOATEX™ - A full range of ASE type acrylic rheology modifiers with key advantages such as:

- Ease of use
- Versatility
- Low dosage
- High efficiency
- High body and structure
- Good anti-settling

Viscoatex™ product range offers an excellent alternative to HEC thickeners.

KEY BENEFITS

Homogeneity upon thinning

KEY BENEFITS

Suspension stability

Sag resistance

DISPERSING AGENTS

Paints, coatings, inks, adhesives and sealants are formulated systems with a wide diversity of **pigments and fillers which can vary significantly** in terms of combination and content depending on the end-use requirements.

Such ingredients will interact within the system and require to be **well dispersed and stabilized** in order to provide the maximum effect with a minimum impact on the viscosity of the formulation, while keeping a good processability.

Wetting and dispersing agents are playing a key role and the correct choice is crucial for a given system.

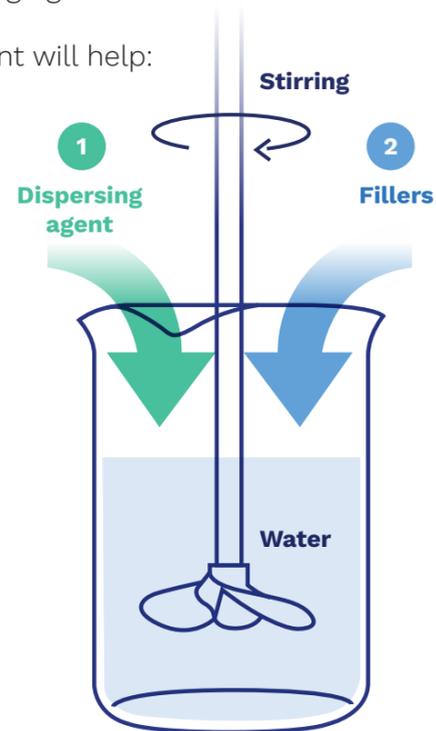

DISPERSING AGENTS TECHNOLOGIES

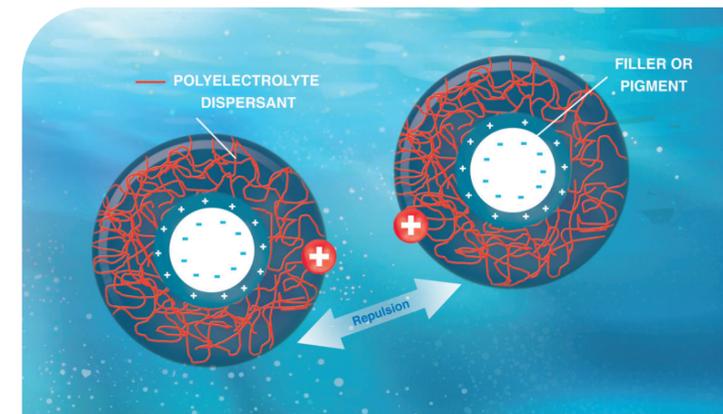

Optimize your pigmented formulation by selecting the recommended dispersing agents.

The right choice of dispersant will help:

- Maintain **proper dispersion state and storage stability**
- Allow the most flexible **rheological adjustment** possible
- Improve **color development, opacity and gloss control**
- Achieve better **water resistance** through a good binder matrix or **film homogeneity**

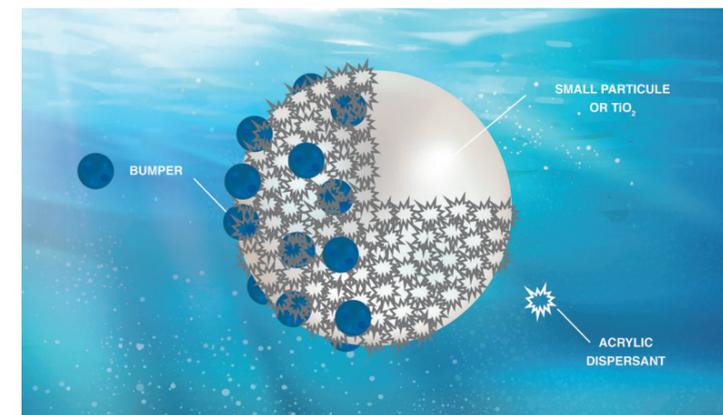

ELECTROSTATIC REPULSION

- Long distance for minerals
- In-can stabilization
- Productivity/cost effective

► **Acrylic based ionic dispersants for electrostatic stabilization**

BUMPER EFFECT

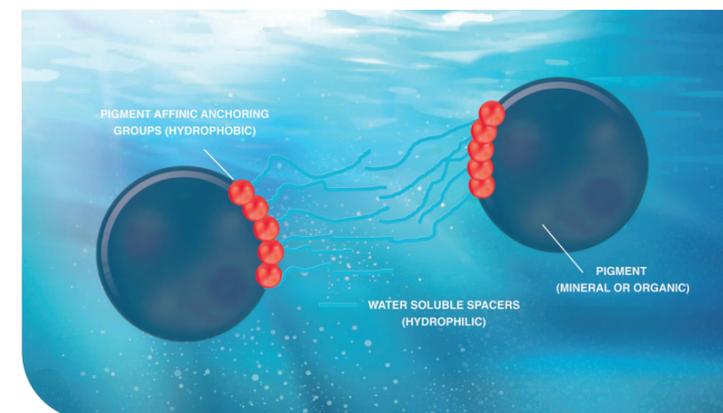

- Short distance
- Prevention of small particles or TiO₂ late flocculation
- Problem solving

► **Pigment is coated with the most adapted acrylic dispersant**

► **Addition of a Bumper that will create a layer of spacing spheres around the polyacrylate layer**

STERIC HINDRANCE WITH AFFINIC GROUPS

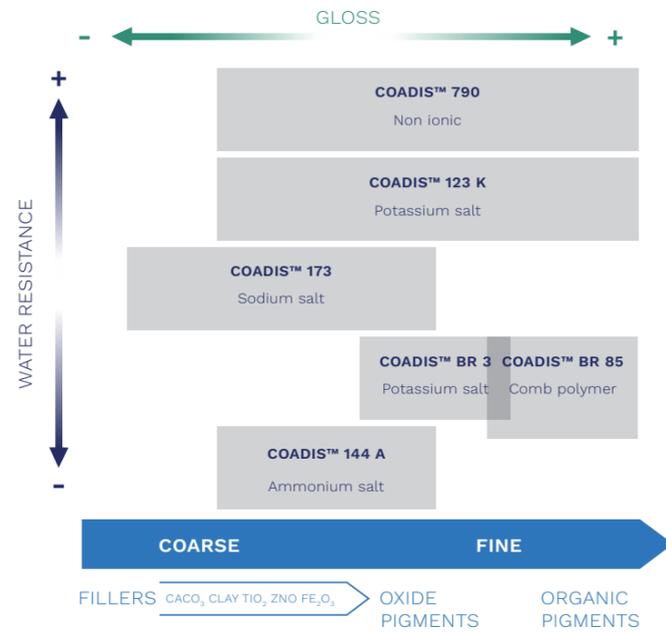

- Short & long distance
- For organic & inorganic
- For all types of waterborne coatings

► **Steric stabilization**

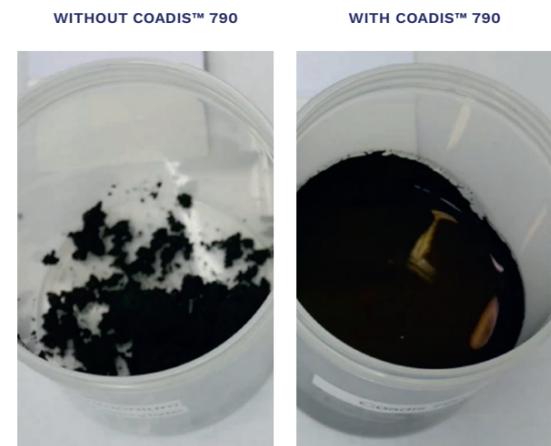

Silk gloss paints but also high solids formulations such as thick coatings, sealants and putties require specific solutions. The Coadis™ dispersants range exhibits original solutions that combine:

- Superior optical properties
- Gloss and gloss retention
- Color strength
- Hiding power with great applications properties
- Good flow and leveling

KEY BENEFITS

Carbon black dispersion

Transparency & clarity

FOCUS on MASS BALANCE approach

A bio-based offer using mass balance approach to transition to a more circular and lower carbon economy

Arkema is now offering a brand-new bio-based acrylic materials offer using the “Mass Balance” approach. This new offer allows our customers to benefit from a product range coming from renewable feedstocks with a lower carbon footprint compared to the fossil version.

What is the “Mass Balance” approach?

The “Mass Balance” approach consists in replacing fossil by renewable feedstocks as the origin of the supply chain, segregating by bookkeeping the quantity of renewable material and “attributing” this quantity to finished products at the end of the chain.

The “Mass Balance” approach requires no modification to the process, or new product accreditation as the high quality and performance of the products remain the same, which makes it easier for our customers to take them up.

Certifying the traceability of this bio-based origin

To ensure the traceability of our “Mass balance” products, our whole supply chain is certified by a third party according to the ISCC+ standards. We provide our customers with certificates that guarantee the share of bio-based feedstock in the product they are purchasing.

The ISCC-PLUS certification of the whole supply chain guarantees that the origin of the renewable sources meets ISCC+ standards for sustainable feedstocks.
